

## **Product Description**

The MCP6001(single), MCP6002(dual) and MCP6004(quad) are general purpose, low offset, high frequency response and micro power operational amplifiers. With an excellent bandwidth of 1MHz, a slew rate of  $1V/\mu s$ , and a quiescent current of  $65\mu A$  per amplifier at 5V, the MCP6001/6002/6004 family can be designed into a wide range of applications.

The MCP6001/6002/6004 op-amps are designed to provide optimal performance in low voltage and low power systems. The input common-mode voltage range includes ground, and the maximum input offset voltage are 4.0mV. These parts provide rail-to-rail output swing into heavy loads. The MCP6001/6002/6004 family is specified for single or dual power supplies of +2.0V to+6.0V. All models are specified over the extended industrial temperature range of −40°C to +125°C.

#### **Features**

- General Purpose 1 MHz Amplifiers, Low Cost
- High Slew Rate: 1 V/µs
- Low Offset Voltage: 4 mV Maximum
- Low Power: 65 μA per Amplifier Supply Current
- Unit Gain Stable
- Rail-to-Rail Input and Output
- Operating Power Supply: +2.0 V to +6.0 V
- Operating Temperature Range: -40 °C to +125 °C
- ESD Rating: HBM 4kV, CDM 2kV

## **Applications**

- Smoke/Gas/Environment Sensors
- Audio Outputs
- Battery and Power Supply Control
- Portable Equipments and Mobile Devices
- Active Filters
- Sensor Interfaces
- Battery-Powered Instrumentation
- Medical instrumentation

# **Pin Configurations And Pin Description**

Figure 1. Pin Assignment Diagram

| Symbol          | Description                           |
|-----------------|---------------------------------------|
| –IN             | Inverting input of the amplifier.     |
| +IN             | Non-inverting input of the amplifier. |
| +V <sub>S</sub> | Positive (highest) power supply.      |
| -V <sub>S</sub> | Negative (lowest) power supply.       |
| OUT             | Amplifier output.                     |
| NC              | No internal connection.               |

# **Absolute Maximum Ratings**

| Supply Voltage, +V <sub>S</sub> to -V <sub>S</sub> | 7V                          |
|--|-----------------------------|
| Input Common Mode Voltage Range                    |                             |
| (-V <sub>S</sub> ) - 0.5V to                       | o (+V <sub>S</sub> ) + 0.5V |
| Storage Temperature Range68                        | 5°C to +150°C               |
| Junction Temperature                               | +160°C                      |
| Lead Temperature (Soldering 10sec)                 | +260°C                      |
| ESD Susceptibility                                 |                             |
| HBM (WDJ8631/2)                                    | 8000V                       |
| HBM (WDJ8633)                                      | 4000V                       |
| MM   | 400V                        |
| CDM  | 2000V                       |

# **Recommennded Operating Conditions**

Operating Temperature Range .....-40°C to +125°C

**Note:** Stress greater than those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions outside those indicated in the operational sections of this specification are not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

# **Ordering Information**

| Type Number   | pe Number Package Name |                      |
|---------------|------------------------|----------------------|
| MCP6001T-I/OT | SOT-23-5L              | Tape and Reel, 3 000 |
| MCP6001T-I/LT | SO-70-5L               | Tape and Reel, 3 000 |

## **Typical Performance characteristics**

At  $T_A$  = +25°C,  $V_{CM}$  =  $V_S/2$ , and  $R_L$  = 10k $\Omega$  connected to  $V_S/2$ , unless otherwise noted.

Offset Voltage Production Distribution

Input Voltage Noise Spectral Density as a function of Frequency.

Open-loop Gain and Phase as a function of Frequency.

Common-mode Rejection Ratio as a function of Frequency.

Power Supply Rejection Ratio as a function of Frequency.

Quiescent Current as a function of Supply Voltage.

Quiescent Current as a function of Temperature.

Short-circuit Current as a function of Supply Voltage.

Large Signal Step Response.

Output Voltage Swing as a function of Output Current.

Short-circuit Current as a function of Temperature.

Small Signal Step Response.

## **Application Note**

#### **Size**

MCP600X family series op amps are unity-gain stable and suitable for a wide range of general-purpose applications. The small footprints of the MCP600X family packages save space on printed circuit boards and enable the design of smaller electronic products.

#### **Power Supply Bypassing and Board Layout**

MCP600X family series operates from a single 2.0V to 6V supply or dual  $\pm 1.0$ V to  $\pm 3$ V supplies. For best performance, a  $0.1\mu F$  ceramic capacitor should be placed close to the  $V_{DD}$  pin in single supply operation. For dual supply operation, both

 $V_{DD}$  and  $V_{SS}$  supplies should be bypassed to ground with separate 0.1 $\mu$ F ceramic capacitors.

#### **Low Supply Current**

The low supply current (typical 75µA per channel) of MCP600X family will help to maximize battery life. They are ideal for battery powered systems.

#### **Operating Voltage**

MCP600X family operates under wide input supply voltage (2.0V to 6V). In addition, all temperature specifications apply from -40 °C to +125 °C. Most behavior remains unchanged throughout the full operating voltage range. These guarantees ensure operation throughout the single Li-lon battery lifetime.

#### Rail-to-Rail Input

The input common-mode range of MCP600X family extends 100mV beyond the supply rails ( $V_{SS}$ -0.1V to  $V_{DD}$ +0.1V). This is achieved by using complementary input stage. For normal operation, inputs should be limited to this range.

#### Rail-to-Rail Output

Rail-to-Rail output swing provides maximum possible dynamic range at the output. This is particularly important when operating in low supply voltages. The output voltage of MCP600X family can typically swing to less than 10mV from supply rail in light resistive loads (>100k $\Omega$ ), and 60mV of supply rail in moderate resistive loads (10k $\Omega$ ).

#### **Capacitive Load Tolerance**

The MCP600X family is optimized for bandwidth and speed, not for driving capacitive loads. Output capacitance will create a pole in the amplifier's feedback path, leading to excessive peaking and potential oscillation. If dealing with load capacitance is a requirement of the application, the two strategies to consider are (1) using a small resistor in series with the amplifier's output and the load capacitance and (2) reducing the bandwidth of the amplifier's feedback loop by increasing the overall noise gain. Figure 2 shows a unity gain follower using the series resistor strategy. The resistor isolates the output from the capacitance and, more importantly, creates a zero in the feedback path that compensates for the pole created by the output capacitance.

Figure 2 Indirectly Driving a Capacitive Load Using Isolation Resistor

The bigger the  $R_{ISO}$  resistor value, the more stable  $V_{OUT}$  will be. However, if there is a resistive load  $R_L$  in parallel with the capacitive load, a voltage divider (proportional to  $R_{ISO}/R_L$ ) is formed, this will result in a gain error.

The circuit in Figure 3 is an improvement to the one in Figure 2.  $R_F$  provides the DC accuracy by feed-forward the  $V_{IN}$  to  $R_L$ .  $C_F$  and  $R_{ISO}$  serve to counteract the loss of phase margin by feeding the high frequency component of the output signal back to the amplifier's inverting input, thereby preserving the phase margin in the overall feedback loop. Capacitive drive can be increased by increasing the value of  $C_F$ . This in turn will slow down the pulse response.

Figure 3. Indirectly Driving a Capacitive Load with DC Accuracy

#### **Instrumentation Amplifier**

The triple MCP600X family can be used to build a three-op-amp instrumentation amplifier as shown in Figure 6. The amplifier in Figure 6 is a high input impedance differential amplifier with gain of  $R_2/R_1$ . The two differential voltage followers assure the high input impedance of the amplifier.

Figure 6. Instrument Amplifier

# **Typical Application Circuits**

## Differential amplifier

The differential amplifier allows the subtraction of two input voltages or cancellation of a signal common the two inputs. It is useful as a computational amplifier in making a differential to single-end conversion or in rejecting a common mode signal. Figure 4. shown the differential amplifier using MCP600X family.

Figure 4. Differential Amplifier

$$V_{\text{OUT}} = \left(\frac{R_1 + R_2}{R_2 + R_4}\right) \frac{R_4}{R_1} V_{\text{IN}} - \frac{R_2}{R_1} V_{\text{IP}} + \left(\frac{R_1 + R_2}{R_2 + R_4}\right) \frac{R_2}{R_1} V_{\text{REF}}$$

If the resistor ratios are equal (i.e. R<sub>1</sub>=R<sub>3</sub> and R<sub>2</sub>=R<sub>4</sub>), then

$$V_{\text{OUT}} = \frac{R_2}{R_1} (V_{\text{IP}} - V_{\text{IN}}) + V_{\text{REF}}$$

### **Low Pass Active Filter**

The low pass active filter is shown in Figure 5. The DC gain is defined by  $-R_2/R_1$ . The filter has a -20dB/decade roll-off after its corner frequency  $f_C=1/(2\pi R_3 C_1)$ .

Figure 5. Low Pass Active Filter

#### **Attention**

- Any and all HUA XUAN YANG ELECTRONICS products described or contained herein do not have specifications that can handle applications that require extremely high levels of reliability, such as life-support systems, aircraft's control systems, or other applications whose failure can be reasonably expected to result in serious physical and/or material damage. Consult with your HUA XUAN YANG ELECTRONICS representative nearest you before using any HUA XUAN YANG ELECTRONICS products described or contained herein in such applications.
- HUA XUAN YANG ELECTRONICS assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specifications of any and all HUA XUAN YANG ELECTRONICS products described or contained herein.
- Specifications of any and all HUA XUAN YANG ELECTRONICS products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.
- HUA XUAN YANG ELECTRONICS CO.,LTD. strives to supply high-quality high-reliability products. However, any and all semiconductor products fail with some probability. It is possible that these probabilistic failures could give rise to accidents or events that could endanger human lives, that could give rise to smoke or fire, or that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.
- In the event that any or all HUA XUAN YANG ELECTRONICS products(including technical data, services) described or contained herein are controlled under any of applicable local export control laws and regulations, such products must not be exported without obtaining the export license from the authorities concerned in accordance with the above law.
- No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopying and recording, or any information storage or retrieval system, or otherwise, without the prior written permission of HUA XUAN YANG ELECTRONICS CO.,LTD.
- Information (including circuit diagrams and circuit parameters) herein is for example only; it is not guaranteed for volume production.

  HUA XUAN YANG ELECTRONICS believes information herein is accurate and reliable, but no guarantees are made or implied regarding its use or any infringements of intellectual property rights or other rights of third parties.
- Any and all information described or contained herein are subject to change without notice due to product/technology improvement, etc. When designing equipment, refer to the "Delivery Specification" for the HUA XUAN YANG ELECTRONICS product that you intend to use.
